Expansive window walls in an updated ranch flood this room with natural light. But, as an older home, it sits very near the street, so privacy and simplified light control were key issues. Woven wood Roman shades in a soft ivory were installed on the six living-room windows, operated individually or as groups via plug-in motors. The plug-in option was chosen due to the size of the center shade on each wall. Stationary panels in a pale gray to coordinate with the sofas, were installed to disguise where the shades meet.

“The family spends a lot of time in this room and the motorized window treatments allow them to control light and views with perfect precision,” said Angie Gardeck.
